Berlin May 23d/46

1846

Dear George

A letter from you arrived on the 19th instant a consequence of which was
[illegible] from you which did not suit me much. I should prefer to go back for one by the first Western vessel. I
believe I leave on or rather left N.Y. on the 7th and ought therefore to be with you by that time. I have been engaged
as usual since I last wrote and am well though in want of exercise and fresh air. The Spring has
been very long here and on the whole pleasant though with frequent alternations of heat and cold
and pleasant [illegible] every day. Already we have had a taste of the coming summer and I
[illegible] and shorten a light coat and [illegible]

I am looking forward to leaving Berlin in August and seeing you [illegible]
the Tyrol and perhaps Switzerland so as to be back here in October to settle my affairs finally
in Berlin which I shall take leave of with as little pain as possible. I will make my tour as
economically as possible and expect much pleasure from it - to say nothing of the benefit it will be
way of health and experience. I wish you were here to make one of us. I make pretty up
some good mineral waters through letters tell me if it is far better and cheaper to buy them free of the
mineral dealer Krantz. Have you seen him? I remember me to him if you should do so. I have
nothing of any interest to tell you at this time. Dr Anderson has been spending a week here and has
gone to Hamburg to visit the Professors. He was looking remarkably well and I was glad to meet
him again. We have had many Americans here within the last few weeks, most of whom I had
never heard of before. Mr Hoffman is here and I have seen him at the Ball and called twice upon
him at his hotel. He seems very attentive and rather discourages any attempts to cultivate
an acquaintance with him. I may see more of him hereafter. Mr Donaldson has not yet
arrived. I do not lament the loss of Mr Wheaton but trust that Mrs P may with remain. I wrote
to Dr Torrey by the last steamer - not a very good letter I believe but better than none. This
morning I received the box of minerals and a small package of books, Silliman's Journal, Schoolcraft's
Reports and several pamphlets. These are all acceptable, though I had seen the Journal before. The
number you sent is now five months old. The meeting of the geological association does not seem
to have been very interesting. I hear all the geologists are to be at Lake Superior next summer
so that there will probably be but a thin attendance at the New York meeting in September
I observe that Cyrus Mason is on the Committee of arrangements for that fact. As usual and
of course. Cyrus must have a finger in every pie that is baked on our side of the Atlantic.
